

## PRESS RELEASE

*For Immediate Release:*

**June 2009 - MEGA Industries LLC, Gorham, Maine**

**MEGA Industries** LLC, an ANANIA & Associates Investment Co. LLC (AAI) company, continues to expand its export business with two significant orders shipped overseas, one to Italy and one to Korea. While many companies struggle amidst the volatile economic climate **MEGA** continues to book solid orders in 2009. Additionally, MEGA ventured into a new market with two new products that will prove to be very lucrative as they gain the same level of acceptance as have their waveguide products. .

***“ A recent Maine Technology Institute (MTI) seed grant award received by MEGA has led to our newly developed capability enabling us to manufacture parts which are employed in Ultra High Vacuum systems, which Mega now leads the RF waveguide industry in providing,” commented Peter V. Anania, President of AAI. “Mega is supplying state of the art microwave RF measurement and delivery systems for use in scientific experiments. These experiments are large scale devices probing the smallest building blocks of matter. These devices are several football fields in length and create intense beams of particles that expose the smallest details in the test sample. This technology has revolutionized many areas of science from solid state physics to biology and MEGA continues to supply key components for these systems.”***

MEGA Industries LLC is dedicated to manufacturing the best quality microwave waveguide and component parts for commercial, energy research and defense users of low frequency, high power microwaves. MEGA currently supplies high power, low frequency flexible, semi-flexible and rigid waveguide, waveguide components, coaxial transmission components, equipment for radar systems, broadcast equipment, air traffic control systems and accelerators worldwide used in medical and fusion energy research. Mega's mission is to provide specialized products that meet the customer's exact specifications, whether the need is for one piece or several hundred. MEGA is known worldwide for its quality, first rate service and on-time delivery.

With a senior management team with nearly three decades each of technical and managerial experience in the industry, MEGA has capitalized on long-standing industry relationships and transformed MEGA into a world leader in the low frequency waveguide field. In fact, several members of MEGA's original management were instrumental in the development of worldwide programs such as the **SPS-49, Aegis, Patriot, TRC-170 and OTH Radar Systems.**
