

## Product Data Sheet Multi Probe Tuners

Multi Probe Tuners

Multi screw waveguide tuners can be used to remove VSWR's of up to 1.5:1 over a limited bandwidth at any phase angle for subsystem optimization. We offer 3 or 5 probe tuners as well as E-H tuners that are pressure tight and are particularly suited for system applications where accurate, but infrequent adjustments must be made to system VSWR and phase.

Units are available in either manual or motorized configurations

Waveguide Size	WR2300	WR2100	WR1800	WR1500	WR1150	WR975	WR770	WR650	WR430
