

Mega Industries Bulkhead Flanges help systems designers develop safe and rugged systems that deliver the power when it is needed most. They come with a standard interface that allows joined sections to pass through an opening and then hold the run in place via mounting locations. The design can be adapted or customized to customer specifications for an additional fee.

General Specifications

Waveguide	WR90 to WR2300
Construction	Aluminum or Brass (other by request)
Pressurized	up to 45psig (3 ATM gauge)
Vacuum	up to 10^9 mbar
Insertion Loss	<0.01dB (Not Measurable)

Specifications dependant on waveguide size and subject to change

WR650 Bulkhead Flange

The configuration pictured is the Mega standard WR650 Bulkhead Flange.
