- Broadband
- Available sizes: Type N, 7/16 DIN, 7/8 EIA, 1-5/8 EIA, 3-1/8 EIA, 4-1/16, 6-1/8 EIA
- Independent Interlock / Logic Circuits
- Compatible with Computer Control
- 3-Port and 4-Port Options Available
- Compact, Light Weight

Optional Features
Unflanged Connectors
Gas Pass, Pressure Tight
Additional Interlocks

## Standard Features

Drive: Gear Motor (except N type)
RF Connectors: N(F), DIN(F), EIA (M)
Wiring: Connector on all switches

Accessories
Local / Remote Control Panel (19" Rack Mount)

Mega Industries Coaxial Transfer Switches are designed primarily for application in TV, AM, FM, UHF and other broadcast related areas. Mega acquired the Broadcast RF Switch line (formerly of Micro Communications Inc.) in 2014. As four-port transfer switches, they will switch two signal sources between loads. Since they can also be used as SPDT switches, complex switching matrices can easily be assembled.

A unique feature of these switches is the coplanar port configuration. In most installations, this permits neater, more compact layouts and requires fewer elbows. These switches are usually one-half to one-third the weight and occupy between one-half and one-sixth the volume of other commercially available switches.

Independent interlock / logic circuits are available for transmitter blanking, logic input, or position indication on all but the Type $N$ model. These circuits are isolated from the switch control circuits and from the ground. Internal interlocks are also included to remove the drive power at the end of the switching cycle to prevent inadvertent damage to the drive motor. Action is accomplished by a standard high torque gear motor and is bi-directional to positive stops. In the event of loss of control power, these switches can be operated manually.

Since these switches can be controlled in (1) groups, (2) singly from remote locations, or (3) integrated computer controlled logic systems, they are ideally suited for use in unattended transmitter operations.
